

Godliness Dongorere

Software Engineer & Systems Engineer

+268 7934 2380 godlinessdongorere@gmail.com linkedin.com/in/gdongorere github.com/geehyness godliness.vercel.app

Software engineer with a systems-engineering background, building and integrating mission-critical software for healthcare, hospitality and construction. Most recently designed API-driven applications on .NET, SQL Server and Microsoft Azure, with analytics delivered through Apache Superset. Previously ran hospital systems end to end, from SCADA dashboards and Siemens PLCs to EMR integrations. Strong at architectural design, critical thinking and working directly with stakeholders. Authorized to work in Eswatini with a valid permit.

TECHNICAL SKILLS

Programming

C# .NET Framework Visual Basic Java C++ Python JavaScript TypeScript

Software Engineering & Architecture

Software Development Architectural Design API Development Systems Engineering Systems Management System Integration Integrated Systems
Software Construction Project Management Critical Thinking

Cloud, Data & Analytics

DAX Model Context Protocol (MCP) PII Reduction Clinical Decision Support Microsoft Azure Microsoft SQL Server SQL Server Management Studio
Apache Superset PostgreSQL MongoDB

Web & Mobile

AngularJS React Next.js Node.js ExpressJS React Native Android Studio FastAPI Full-Stack Development Web Design
AI-Driven Solutions Git

Industrial, Hardware & Solutions

SCADA Ignition Siemens PLC TIA Portal Profinet EMR Systems 3D Modeling LAN/WAN VPN Configuration Hardware Troubleshooting

PROFESSIONAL EXPERIENCE

Software Engineer

February 2026 - September 2026

Palladium: Make It Possible

- Built an AI system in CMIS that identifies patients who have interrupted treatment, so that follow-up can be prioritised
- Designed an AI assistant that reads data through a Model Context Protocol (MCP) tool: it generates DAX queries from the user's question and returns processed results, so the model never has direct database access
- Reduced personally identifiable information (PII) in AI responses by returning aggregated and processed data only
- Designed and built software on the .NET Framework with Microsoft SQL Server back ends, managed through SQL Server Management Studio
- Developed and integrated APIs, and contributed to the architectural design of the systems they serve
- Deployed and operated solutions on Microsoft Azure
- Built analytics and reporting dashboards with Apache Superset
- Worked on AngularJS front ends and applied systems engineering and critical thinking to complex, multi-stakeholder problems

Software Engineer

January 2025 - Present

Synapse Digital

- Build and ship full-stack web applications end to end with Next.js, React, Node.js and TypeScript
- Turn designs into responsive, accessible interfaces and profile and optimise application performance
- Integrate third-party APIs and payment and mapping services, and apply AI to analyse data and automate processes
- Manage projects and web design work from requirements to delivery across integrated systems
- Built a multi-restaurant POS platform and a retail inventory system, working directly with business owners to turn operational needs into technical specifications

Systems Engineer

May 2023 - September 2025

The Luke Commission

- Managed critical healthcare systems including Electronic Medical Records (EMR) and specialized medical equipment
- Developed and maintained integrations between medical devices, EMR systems and operational dashboards
- Managed Oxygen Plant operations, software and hardware: built the Oxygen Plant Dashboard (SCADA Ignition), improving product gas quality through real-time visualization, and programmed Siemens PLCs in TIA Portal with Profinet slaves
- Debugged and resolved complex hardware and software issues, ensuring minimal downtime for life-critical systems
- Provided comprehensive ICT support to medical and administrative staff
- Created custom 3D-printed medical devices, including camera mounts and orthoses, with clinical teams

Freelance Android Developer

YukiSoft

- Developed Android applications as a freelance developer

Technical Support Specialist

March 2022 - December 2022

Ka-Zakhali Private School

- Developed a custom reporting system for school reports, addressing data accuracy and accessibility challenges
- Provided ICT support, troubleshooting hardware and software issues for staff and students
- Taught Computer Application Technology to Grade 9-12 students, improving digital literacy

KEY PROJECTS

Oxygen Plant Dashboard

The Luke Commission

Problem: No centralized monitoring of critical oxygen production equipment, affecting product quality in a healthcare setting.

Solution: SCADA Ignition dashboard integrating multiple sensors and control systems with real-time visualization and alerting.

Contribution: Led system design, PLC programming and Profinet integration with existing infrastructure.

AGT FieldCore - Construction Field Management System

Freelance Project

Problem: Remote construction sites with poor connectivity needing offline-capable field management, accountability and safety compliance.

Solution: Offline-first Progressive Web App with on-device TensorFlow.js photo analysis and hazard detection, digital signatures and QR asset tracking.

Contribution: Lead developer and system architect: edge AI, offline data sync, PWA optimization, real-time collaboration.

Multi-Restaurant POS System

Collaboration with Carte

Problem: Independent restaurants needing affordable, centralized management without enterprise software costs.

Solution: Custom POS platform supporting multiple business entities with centralized reporting, inventory and customer features.

Contribution: Full-stack development in C#, database design, API development, payment and third-party integrations.

And many more projects. See my full portfolio at godliness.vercel.app.

EDUCATION

Bachelor of Science in Computer Sciences and Informatics, University of Johannesburg

Graduated December 2020
