Re: Application for Programmer (EARP), reporting to the Senior Programmer

Dear Sir/Madam,

I am applying for the Programmer position in EARP. I am a software engineer with a BSc in Computer Sciences and Informatics (University of Johannesburg) and more than three years of experience building and integrating enterprise systems on Microsoft .NET, SQL Server and PostgreSQL. My CV and certified qualifications are attached.

The role asks for secure .NET applications, enterprise integration and DevOps. Here is how my work matches:

.NET and databases. I built the Eswatini Health Indicators API on ASP.NET Core (.NET 9) with Entity Framework Core, Dapper and SQL Server. It has JWT authentication, rate limiting, structured logging, health checks and OpenAPI documentation. It also includes three scheduled ETL services that load HIV testing, PrEP and treatment data in batches with de-duplication. At Palladium I worked on the SQL Server data layer, APIs and architecture, deployed on Azure with .NET and AngularJS.

Integration. I have built and supported REST integrations with payment platforms (PayFast, including signature verification and server-side validation of payment notifications), mapping and third-party services. At The Luke Commission I maintained integrations between medical devices, EMR systems and dashboards, with real-time and batch data exchange, and resolved faults on life-critical systems with minimal downtime.

Security and DevOps. I apply secure-coding practice through token-based authentication, password hashing, API key protection and rate limiting. At Palladium I designed an AI assistant that reaches data only through an MCP tool returning aggregated results, so the model had no database access and personal information stayed out of responses. My projects use Git and CI pipelines with automated linting, type checks, unit tests and browser tests, and I work in iterative, Agile-style delivery. I use AI coding assistants and agentic development tools daily to move faster without lowering quality.

I am also keen to learn more about the SOAP services and mainframe data-exchange side of your environment. I am used to learning new systems quickly and documenting them so teams can support them.

I am authorized to work in Eswatini and would welcome an interview. My referees are listed in my CV. Thank you for your time and consideration.

Yours faithfully,

Godliness Dongorere
